### Highest Construction Technology Beyond Comparison

The unique construction quality is what makes the project beyond comparison.

As being the first composite building in Türkiye, the core of building is composed of reinforced concrete while the rest of the building is surrounded by steel.

With its amazing structure, the building has 3 independent wings although they are connected to the same core.

The project is located within Sarıyer district and has the closest spot to the Bosphorus on Büyükdere Street. The line extends from Maslak to Besiktas.

Since the district's demand for residential is high, the project offers a high investment value with its unique location.
